OCTOBER 5, 2026 · SCAN 01

Amelia, your skin is telling a clear story.

Here's what we see, and where we'd begin.

Your wedding · January 11 — 14 weeks away

Texture | Pigmentation | Pores

Texture is how smooth your skin looks up close. Yours shows some unevenness across the cheeks and forehead, which tends to respond well to a peel series.

Your three priorities

Scores run from 1 to 100. Higher means healthier-looking skin.

01
Texture — 58 /100

Your biggest opportunity, and the area most likely to show visible change with treatment.

02
Pigmentation — 61 /100

Uneven tone across the upper cheeks. Responds well to the same peel series, so one plan covers both.

03
Pores — 66 /100

Mildly visible around the nose. We expect this to improve as texture does.

DECEMBER 28, 2026 · SCAN 04 · WEEK 12

Amelia, your skin has moved.

Twelve weeks in. Here's what's changed since your first scan.

October 5

December 28

Same light, same angle. Verified at capture.

What's changed

Texture +13

58 → 71

Your biggest win. Skin looks noticeably smoother across the cheeks and forehead.

Pigmentation +9

61 → 70

Tone is evening out steadily. Daily SPF is protecting this progress.

Pores +3

66 → 69

Moving slower, which is normal at this stage. Expect more change after microneedling settles.

YOUR PRACTITIONER'S NOTE

Texture has improved the most, which is exactly what we hoped. One more peel before January 11 locks in your tone for the day.
